## **DFA:**

DFA M= $(Q, \sum, \delta, Q0, F)$  Where

Q=Set of all states = $\{q0,q1,q2,q3,q4\}$ 

 $\Sigma$ =Input Alphabet={a,b},

Start state is q0

F=Set of all final States={ q3,q4}

And the transitions are defined in the transition diagram.

## **CODE:**

```
#include<stdio.h>
void main()
  int state=0,i=0;
  char token,input[20];
  printf("Enter input string \t :");
  scanf("%s",input);
  //printf("Given string is: %s");
  while((token=input[i++])!='0')
    // printf("current token : %c \n",token);
     switch(state)
       case 0: if(token=='a')
               state=1;
            else if(token=='b')
               state=3;
             else
               printf("Invalid token");
               exit(0);
            break;
       case 1: if(token=='a')
               state=2;
            else if(token=='b')
               state=3;
             else
               printf("Invalid token");
               exit(0);
```

```
}
        break;
   case 2: if(token=='a')
           state=2;
        else if(token=='b')
           state=3;
        else
           printf("Invalid token");
           exit(0);
        break;
   case 3: if(token=='a')
           state=1;
        else if(token=='b')
           state=4;
        else
           printf("Invalid token");
           exit(0);
        break;
   case 4: if(token=='a')
           state=1;
        else if(token=='b')
           state=4;
        else
           printf("Invalid token");
           exit(0);
        break;
// printf("state = %d ",state);
```

```
}
if(state==4 || state==2 )
    printf("\n\nString accepted\n\n");
else
    printf("\n\nString not accepted\n\n");
}
```

## **OUTPUT:**

INPUT	EXPECTED OUTPUT
aab	String not accepted
abbaa	String accepted
abab	String not accepted
ababaa	String accepted
ababba	String not accepted
